While PCB performance specifications have come in above the 600GH we originally projected, we have not yet hit the 1TH/s per PCB mark that we set for ourselves based on the strength of the underlying ASIC chip. We have achieved much higher speeds on test boards, but in order to be able to ship now we have stabilized the board at 700GH/s with power efficiency of 0.70 W/GH (+/- 10%). While we will continue to pursue the 1TH version of the Monarch for subsequent delivery, we want to get the best product we can out to you now. Shipping of Monarchs will begin next week.

Here is an image of the Monarch ready for

shipment to customers right now.
(Please note the form factor with water cooling instead of air cooling)

As a reward for customers' patience and loyalty, we are adjusting the price of the 700 GH/s boards to $1,379 (ONLY $1.97/GH) and will be providing rebates/refunds for the difference. (Does not include cloud mining or Mining by the GH)

For those interested in running cards in power efficiency mode, here is a chart of power consumption at different speeds (@220V):

GH	Total W	W/GH
550	339	0.62
600	368	0.61
650	432	0.66
700	471	0.70
730	530	0.73
780	609	0.78

Specific details about updates to customer orders will be emailed and posted to each customers' dashboards as boards are ready to be shipped.
